

MOTOR POOL & KEY CONTROL

Motor pool management and integrated key control, keeping shared resources secure, available, and fully tracked.

MOTOR POOL

Shared vehicles need structure. Collective Data's motor pool module gives fleet coordinators full visibility into vehicle availability, reservations, and utilization, so the right vehicle is always in the right hands at the right time. Managers can see what's checked out, what's coming back, and what's sitting idle, all from one screen.

Reservations

Manage vehicle bookings with date, time, & department visibility

Real-Time Availability

See checked-out, returned, & idle vehicles at a glance

Utilization Tracking

Identify underused assets & optimize your pool size

KEY CONTROL INTEGRATION

Collective Data integrates with Real Time Networks' KeyTracer system to automate key distribution in your Motor Pool workflow. A driver reserves a vehicle and the right key is released automatically upon arrival at the keybox. This solution provides a hands-off approach to Motor Pool checkouts and returns with a complete audit trail from start to finish.
